

# SOURCES

for Quality  
Preserved Wood  
Products

Western Wood Preservers Institute represents the preservative-treated wood industry in western North America. WWPI members are dedicated to providing quality products that meet all building code and treating standards while using only EPA-registered preservatives.

## Assurance of Quality

To comply with building codes, preservative-treated wood must be marked with the quality stamp or end tag of an accredited American Lumber Standard Committee (ALSC) agency.

Quality marks for preserved wood products are sometimes confusing with extensive product information, including proprietary brands or warranties. WWPI offers the CheckMark® Identification Program to help users easily recognize and distinguish an ALSC-accredited agency's trademark. Look for the CheckMark® on the stamp or end-tag to quickly find the ALSC accredited agency's logo.

Review the back page to find the WWPI Treater Members who can provide the preserved wood products required for your project.

## Best Management Practices

Members of WWPI share the public concern for a sound economy, healthy environment and good stewardship of all natural resources. WWPI Members follow an Environmental Code which focuses on: production of high quality products; operating facilities in a manner which meets or exceeds applicable regulations; supporting research to develop consumer and environmentally friendly products and processes; supporting scientifically appropriate standards and regulations; and proper disposal including recycling and reuse.

The industry has developed Best Management Practices (BMPs) for the production and use of treated wood products in aquatic or other sensitive environments. BMPs are intended to minimize movement of preservatives into the environment. The program calls for third-party certification provided in writing or by the presence of the BMP Quality Mark. Visit [PreservedWood.org](http://PreservedWood.org) for more information on project evaluation and specification of BMPs.
